Current Approaches To Limits And Areas In Dialectology
In the current analyses we limit our sample to the 22,177 individuals (male = 10,395 [47%], female = 11,782 [53%]) in Wave 2 who had consumed at least one alcoholic beverage in the past year. We did so because individuals who abstained from drinking would contribute little to no variance to both AUD criteria endorsement and the drinking-related validity measures.

Current Approaches To Limits And Areas In Dialectology
Each has its specific purposes and modus operandi. Accordingly, while there are generic similarities in the approaches for determining workplace exposure limits in the United States, there are also finite differences in the philosophies, organizational structures, and chartered mandates of the organizations active in such endeavors.
