Algorithmic bias describes systematic and repeatable errors in a computer system that create unfair outcomes, such as privileging one arbitrary group of users over others. Bias can emerge from many factors, including but not limited to the design of the algorithm or the unintended or unanticipated use or decisions relating to the way data is coded,

Machine learning (ML)
is the study of

computer algorithms
that can improve
automatically through
experience and by the
use of data. It is seen
as a part of artificial
intelligence. Machine
learning algorithms
build a model based on
sample data, known as
training data, in order
to make predictions or
decisions without being
explicitly programmed
to do so.
