A database management system (or DBMS) is essentially nothing more than a computerized data-keeping system. Users of the system are given facilities to perform several kinds of operations on such a system for either manipulation of the data in the database or the management of the database structure itself. Database Management Systems (DBMSs) are categorized according to their data structures ...

What is a database management system?

A database is an organized collection of data, generally stored and accessed electronically from a computer system. Where databases are more complex they are often developed using formal design and modeling techniques.. The database management system (DBMS) is the software that interacts with end users, applications, and the database itself to capture and analyze the data.

Database - Wikipedia

Database Management Systems (DBMSs) † DBMS: a collection of general-purpose, application-independent programs providing services to 3 define the structure of a database, i.e., data types and constraints that the data will have to satisfy 3 manage the storage of data, safely for long periods of time, on some storage medium controlled by the DBMS 3 manipulate a database, with efficient user ...
