In my physics coursework I intend to study 'paper helicopters'. A paper helicopter is a piece of plain A4 paper that has been folded, so that when dropped, it spins whilst falling to the ground. Below is a picture of one of the helicopters used. The top half of the piece of paper is cut down the

explore the principles of flight. Simple explanation: Wind speed and wing shape affect how a helicopter flies. Detailed explanation: For objects to fly, they must overcome the forces of gravity and drag with the forces of lift and thrust.

Paper helicopters are a fun activity that demonstrates gravity, drag and thrust. Using paper, scissors, and a few paper clips to make helicopters, you too can design something to fall with style. Use the attached template for the design of the helicopters, or design your own! Even Woody and Buzz would be impressed.

Step 1: Cut the paper to a width of 5cm. Step

2: Cut the paper the length of paper rotor length plus leg length, and add 2 cm for the body. Step 3: Cut

dotted lines at Leg A and Leg C. The length of each cut is 5 cm minus leg width

divided by 2. Step 4: Fold leg A onto leg B.
