Pathways To Prominence In Neuropsychology

Dopamine (DA, a contraction of 3,4-dihydroxyphenethylamine) is a neuromodulatory molecule that plays several important roles in cells. It is an organic chemical of the catecholamine and phenethylamine families. Dopamine constitutes about 80% of the catecholamine content in the brain. It is an amine synthesized by removing a carboxyl group from a molecule of its precursor chemical, L-DOPA, which ...

Dopamine - Wikipedia

Frameworks of object quality processing. A. Original formulation of the dorsal and ventral pathways in macaque monkey. The ventral pathway was described as a multisynaptic pathway projecting from striate cortex (cytoarchetectonic area OC) to area TE in the inferior temporal cortex, with a further projection from TE to ventral prefrontal region FDv.
